

The Verti-Gro® Vertical Garden Systems can fit in nearly any space, uses a fraction of the water of a ground based garden, and helps make gardening fun for everyone. In a small two square foot print we can help you to grow 20 to 30 plants in a stacking column of garden. The Verti-Gro gardening method increases plant density helping you feed your family! Who knew you could have so much garden, in so little space.?

**We are growing up!**

**Wisdom + Integrity + Innovation = Verti-Gro Results!**

**Lettuce, Vegetable, and Herb Garden in the Vertical Towers by Verti-Gro®**

**Verti-Gro® Vertical Gardening** systems designed by industry pioneer Tim Carpenter created a better way to garden. Using both horizontal and vertical space we grow plants vertically in stacks maximizing space and reducing usage of water and raw materials.

We call this, **“Vertical Gardening”**.

We created garden efficiency using less space, less water, less plant nutrients, and making weeding a thing of the past! Verti-Gro gardening maximizes the FUN part of gardening.

**We will do our BEST for your BEST BENEFIT.** -Verti-Gro Team

## What is UP with Vertical Gardening?

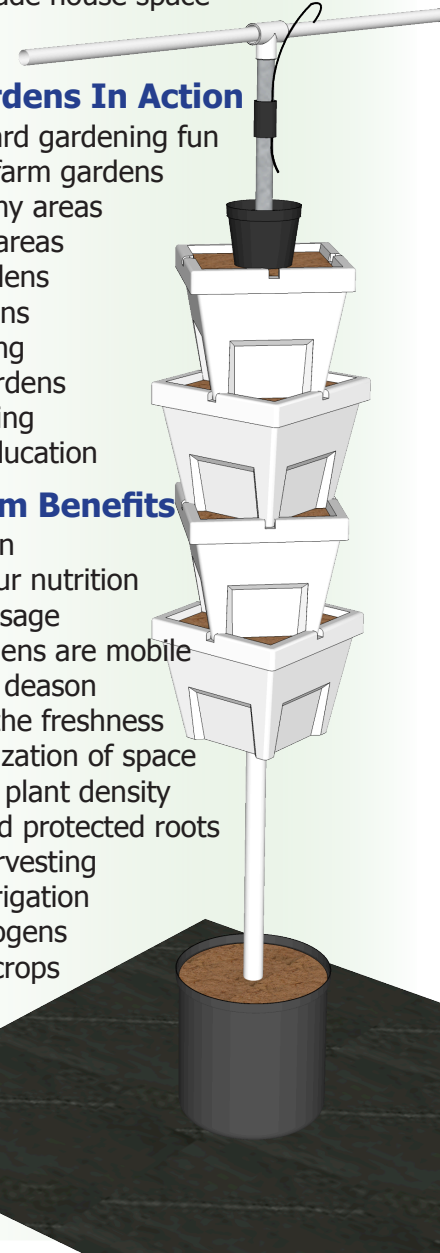

- Use more space by gardening in 3D
- Gardening for small well lit spaces
- Vertical Gardening is virtually weed free
- Pick vine ripened produce that tastes great
- Keep your garden away from ground pests
